

Caribou Glove Box Liner Installation for Vespa GT, GTS, GTS Super, GTV

NOT TO BE USED WITH GLOVE BOX OPEN WHILE RIDING!

Clean the inside of the glove box thoroughly with soap and water, let dry completely. The adhesive-backed Velcro is the strongest available, but it won't stick if the surface inside your glove box is dirty. Peel off the backing from the bottom edge of the liner Velcro only, and stick as shown below all along the upper (and outer) part of the glove box black plastic part.

Next peel the backing off the side strips one side at a time, and stick the Velcro to the vertical side sections deep into the glove box. When done it will look like this.

You can pull the adhesive backed Velcro off once or twice to make adjustments, but any more than that and it will start to lose its stickiness. When you have it just right, press it down hard and let set of 1 full day. If you have any problems, call us at 303-786-8947 or email roger@cariboucases.com
